B.V.S. PRASEEDA

praseeda838@gmail.com | praseeda99.github.io | GitHub | LinkedIn

SUMMARY

AI-native builder and Computer Science undergraduate (graduating 2027). Uses AI coding tools to turn ideas into working LLM and ML products, then lets benchmarks, tests and source checks decide what stays. Focused on AI that shows its evidence. Open to AI engineering internships and full-time roles.

EXPERIENCE

AI/ML Engineering Intern | Next Skills 360 EdTech Private Limited — Apr 2026 - May 2026

- Built a complete RAG chatbot that answers questions from textbook content, combining embeddings-based semantic retrieval with a fine-tuned LLaMA model.
- Compared LoRA/PEFT, full fine-tuning and prompt-tuning on accuracy against compute cost, selected LoRA/PEFT and documented the evaluation.
- Preprocessed stroke-sequence data from Google's Quick, Draw! dataset and trained a Sketch-RNN model to generate doodles.

PROJECTS

FinSight: Grounded Q&A on Financial Reports | Final-year project, in progress | Code

- Building question answering over financial-report pages on the TAT-DQA benchmark with open LLMs, adding retrieved solved examples to each prompt.
- Sends arithmetic to a safe Python executor instead of trusting the LLM, and checks every operand against the page.
- Returns each answer with its unit, calculation and highlighted source rows; also generates a risk report on liquidity, leverage and growth.
- Evaluating with the official TAT-DQA scorer, with a user study designed to test whether evidence improves trust.

AI Credit Risk Scoring | Solo project | Python, XGBoost, SHAP, Streamlit

- Trained XGBoost for loan-default prediction on banking data (83.2% ROC-AUC), with SHAP explanations and a Streamlit dashboard simulating loan approval.

FinShield: Personal Finance Copilot | Solo project | React, Express, MCP

- Built a working demo that flags stale subscriptions and hidden bank fees, assesses income stability and produces a step-by-step plan for a simulated financial crisis.
- Exposed the engine as an MCP server with 14 tools that plugs into Claude Desktop, and as a web app with chat, a live dashboard and a tool-approval screen.
- Designed for user control: nothing is cancelled or flagged without explicit approval. Runs on mock financial data.

GreenCommute: Ride-Sharing Platform | Team of 4 | React, Node.js, Express, MongoDB | Code

- Owned the Privacy, Safety and Feedback module across backend and frontend: post-trip ratings, incident reporting, support tickets and privacy and emergency-contact settings.
- Added admin screens for incidents and community guidelines, authenticated API routes, and Jest tests running on an in-memory MongoDB.
- Team platform pairs riders by route overlap and rewards pooled rides with carbon credits.

Fall Detection in Images | Python, MediaPipe, CNNs

- Compared Gradient Boosting on pose features with CNNs on a public dataset: 91.30% accuracy against 91.67% for VGGNet.

TECHNICAL SKILLS

LLMs & GenAI: RAG, LLM fine-tuning (LLaMA, LoRA/PEFT), BM25 and TF-IDF retrieval, MCP servers, Hugging Face Transformers
Machine Learning: XGBoost, Gradient Boosting, SHAP, CNNs, scikit-learn, Pandas, NumPy, MediaPipe
Languages & Tools: Python (primary), JavaScript, SQL, C++, Streamlit, Git, AI coding assistants

EDUCATION

Amrita Vishwa Vidyapeetham | B.Tech, CSE | Coimbatore | CGPA: 6.81 — 2023 - 2027 (expected)
Aditya Junior College | Intermediate (MPC) | Kakinada | GPA: 7.5 — 2021 - 2023
Aditya High School | S.S.C. | Kakinada | 83.3% — 2021

ACHIEVEMENTS & ACTIVITIES

- **Smart India Hackathon:** selected from many college teams and advanced to the next round with a team-built attendance management system.
- **Coding:** CodeChef: 403 problems, Silver Problem Solver badge | LeetCode: 132 problems (47 Medium, 8 Hard)
- **Certifications:** Financial Markets (with Honors), Yale University via Coursera, Oct 2025 (Verify) | TeachNook (IIT Roorkee), Data Science
- National Service Scheme (NSS): Active Member
